

# The Installation of GLScene For Embarcadero RAD Studio

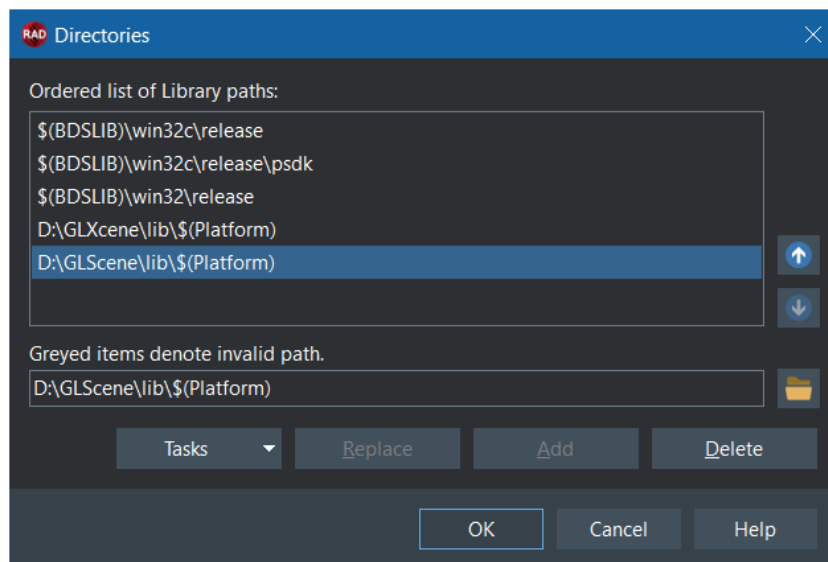

1. Download GLScene source codes from the Sourceforge repository  
<https://svn.code.sf.net/p/glscene/code/> to your disk, e.g. D:\Library\SVN\_GLScene. Use Github Desktop or TortoiseSVN/TortoiseGit clients or RAD Studio's embedded subversion control system in menu File|Open From Version Control... to check out the code. You may also get the whole current Snapshot of the trunk from code page <http://sourceforge.net/p/glscene/code/HEAD/tree/> or download archive zip files with previous releases of GLScene at the page <http://sourceforge.net/projects/glscene/files/>
2. Make a copy of the trunk in a separate directory, e.g. in the working directory D:\GLScene, to prevent original sources from occasional changes. You may skip the step if you don't need to update your copy of code from SVN repository further.
3. Run \_setupDLL.cmd before installation of packages in IDE from directory ..\GLScene\external as administrator to copy third party dynamic libraries into C:\Windows\System32 and C:\Windows\SysWOW64 directories to support 3D sounds (BASS, FMOD, OpenAL), game API (SDL2), nVidia CG shaders and physics (ODE, Newton). In other cases you may place the DLLs in your program.exe directory for calling from your application
4. Setup Delphi Library Paths in Options|Language dialog. Open Delphi Options Library page and add paths to GLScene sources and dcu files. The same for Win64 with DCUs in ..\lib\Win64

5. Setup C++ Options for C++ Compiler to include HPP files. Open Cpp Options dialog for Paths and Directories and add paths in “System include path” to GLScene’s headers for Win32: and Win64

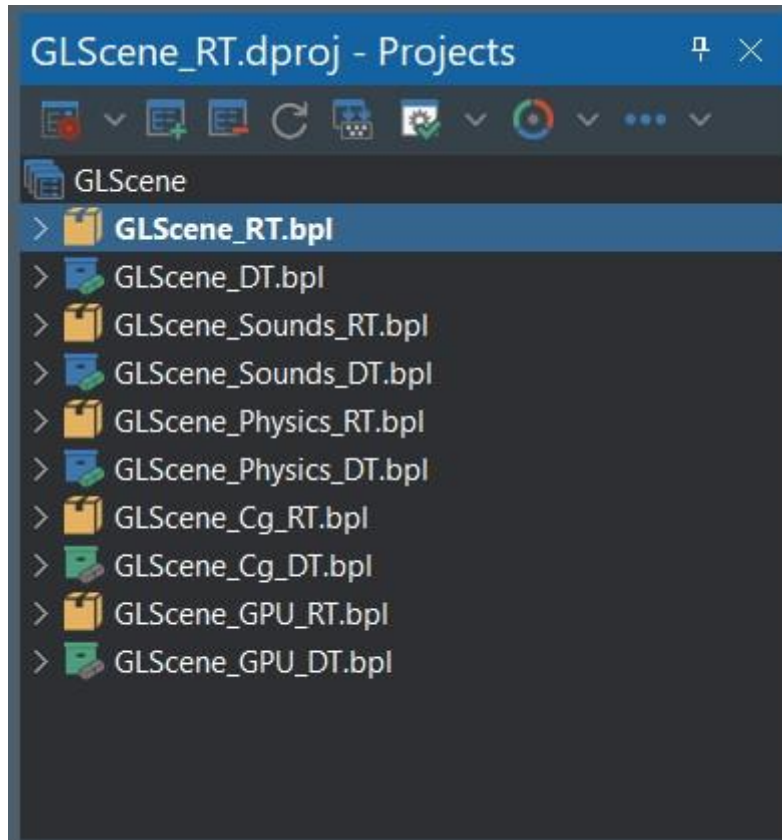

6. Setup C++ Options for libraries files. Add paths in “Library paths” to lib/bpi files for Win32: and to lib/bpi files for Win64:

7. Open the GLScene.groupproj in your directory ..\GLScene\Packages\ using menu item File|Open Project...(Ctrl+F11). In Project Manager window you will find the next list of projects with \*.bpl extensions:

The paths for Delphi/C++ Compilers all saved in packages of the group project.

8. Compile GLScene's packages for Win32/Win64 using "Compile All From Here" and install components by choosing every DT (DesignTime)

package in GLScene.groupproj to RAD Studio component palette. Then you should get an information for GLScene\_DT.bpl as shown below

9. Run Demos for Delphi & C++Builder in ..GLScene\Demos directory.
